ABOUT GNOSIS INSTITUTE

Gnosis Institute provides medical, hospital, and diagnostic and therapeutic auxiliary services. It also gives special attention to the development, application, and management of new products, methods and educational processes in the health industry. One of the main concerns of **Gnosis Institute** is to share scientific knowledge, encouraging and facilitating the publication of its own and third-party works, in addition to developing internship programs, scholarships, awards, among others.

THE SEARCH FOR SAFETY AND PERFORMANCE

Currently, most organizations and companies from all industries have their files and procedures digitized. It is thus **essential to ensure that computer systems are functional and protected at all times**. In this way, not only are leaks of personal and private information prevented, but also day-to-day procedures are facilitated by having an infrastructure that adequately responds to incidents.

From day one, **Gnosis Institute** has used ESET's cybersecurity solutions to protect the institution's devices, stored information, and communications.

ESET: AN EXCELLENT OPTION IN THE MARKET

When opening its facilities in 2018, the IT team of **Gnosis Institute** knew that it would need a security product that would not only ensure the protection of endpoints and servers, but that would also have minimal impacts, avoiding slowdowns in devices and programs.

"When we started our search for solutions, we surveyed the different providers available on the market, their offerings and performance, and that's how we got to know ESET", affirms José Ricardo de Souza Aguiar, DPO of Gnosis Institute.

After evaluating and comparing the rankings of different providers, as well as their products performance, their effectiveness in responding to possible threats and/or the availability of the technical and commercial team to answer questions about the products, the IT specialists at **Gnosis Institute chose ESET**.

"We had not yet tested ESET products, but the references we found reassured us that they were compatible with what we were looking for", complements Souza Aguiar.

THE DECISION: ESET PROTECT ADVANCED

Finally, in July 2018, **Gnosis Institute** purchased a total of **2,050 seats** for **ESET PROTECT ADVANCED ON-PREM**, which, as a package, also includes full-disk encryption and advanced threat defense, besides protection for endpoints and files.

This latest feature enables the institution to build a comprehensive barrier against ransomware and never-before-seen threats, applying adaptive scanning, machine learning, and cloud-based sandbox technologies for advanced detection.

Finally, as with all ESET solutions and packages, the product includes, free of charge, the **ESET PROTECT** management console, which provides visibility into threats, users, and quarantined items in a single glasspane, allowing remote execution and unified tasks.

"We are happy and satisfied with the decision, as we had no problems with the product or security incidents; every time we needed technical assistance, the local team in Brazil responded effectively", concludes José Ricardo de Souza Aguiar, DPO of Gnosis Institute.
