ESET®

MOBILE PROTECTION

Multilayered technology, machine learning and human expertise working together to provide comprehensive security for all platforms

CYBERSECURITY
EXPERTS ON YOUR SIDE

What is a mobile protection product?

A mobile protection product can be separated into two distinct categories: security and management.

The security features range from antimalware, anti-phishing, limiting access to unsecure connections and much more.

Management features include remotely wiping devices, restricting application installs, pre-configuring devices for users and other items related to IT management.

Mobile protection typically covers Android and Apple devices, the two most widespread mobile operating systems. As these OSes are different, mobile protection capabilities can vary between these systems.

No need for a dedicated solution for full mobile device management – oversee smartphones and other endpoint devices from a single point with ESET PROTECT.

"Centrally managed security on all endpoints, servers and mobile devices was a key benefit for us."

— IT Manager; Diamantis Masoutis S.A., Greece; 6,000+ seats

Technical features

Android/iOS

ANTI-THEFT

Easily remote lock, wipe, or kick off a siren on a potentially lost or stolen device. Additionally, you can send custom messages directly to devices, or set up lock screen information to help ensure devices get returned to proper owners.

APPLICATION CONTROL

Offers administrators the option to monitor installed applications, block access to defined applications, permissions, or categories and prompt users to uninstall particular applications.

DEVICE SECURITY

Left up to a user, device security is usually not implemented properly. Therefore, ESET allows admins to define password complexity requirements, set screen lock timers, prompt users to encrypt their device, block cameras and more.

CLOUD MANAGEMENT CONSOLE

Smartphones, along with desktops and servers, can be fully managed from a single-pane-of-glass cloud console, ESET PROTECT, for the complete security overview of your network.

Android only

MULTILAYERED DEFENCE

A single layer of defence is not enough for the constantly evolving threat landscape. All endpoint products have the ability to detect malware pre-execution, during execution and post-execution, all while remaining mobile-optimised.

MACHINE LEARNING

All ESET endpoint products have been using machine learning, in addition to our other layers of defence, since 1997. Specifically, machine learning is used in the form of consolidated output and neural networks.

ANTI-PHISHING

Protects users from fake websites that attempt to acquire passwords, banking data and other sensitive information.

APPLICATION AUDIT

Tracks applications and their access to personal and company data. Sorted by categories, it allows administrators to monitor and control applications' access.
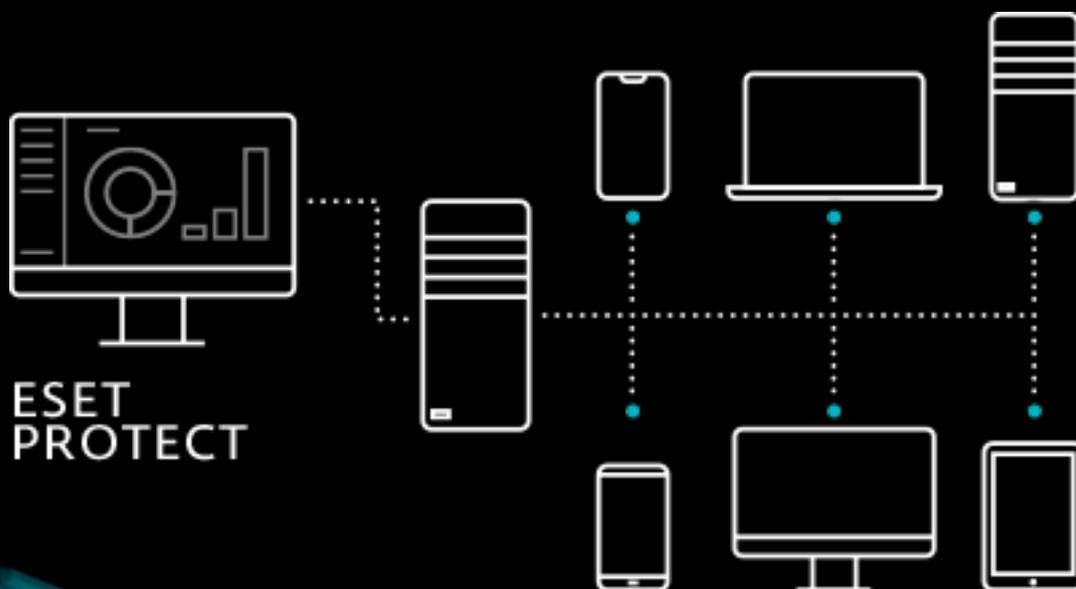

iOS only

APPLE iOS MANAGEMENT FRAMEWORK

No need for dedicated solutions – take advantage of Apple iOS Management Framework and oversee the security of all company iOS devices from a single point with ESET PROTECT.

PUSH ACCOUNT SETTINGS REMOTELY

Remotely push out account settings such as Wi-Fi, VPN and Exchange information.

MOBILE DEVICE MANAGEMENT

Both user and admin is automatically notified if the current device settings are not in compliance with corporate security policies, and the necessary changes are suggested.

*The availability of the features above is dependent on Android/iOS system restrictions and the version of the mobile OS.

ESET PROTECT

With ESET PROTECT, you get a full visibility of the network, from mobiles to workstations and servers.
