ESET PROTECT Entry

THE CUSTOMER

A leading provider of Building Automation Systems in Southeast Michigan, this company specializes in creating smart, energy-efficient environments for commercial properties. With an extensive portfolio spanning new construction and system retrofits, their solutions empower facility operators to optimize performance and reduce operational costs. Though small in size, the company's digital footprint spans across multiple job sites and remote work environments, making cybersecurity an essential pillar in maintaining smooth, uninterrupted service delivery.

THE CHALLENGE

With technicians frequently working in the field and connecting from various locations, the company needed a dependable way to prevent intrusion, protect endpoints, and secure mobile workers. The goal was to ensure that every system—from headquarters to remote laptops—remained protected against cyber threats without adding unnecessary complexity to the IT environment.

THE SOLUTION

ESET PROTECT Entry delivered just what the team needed: simple, effective protection with minimal management overhead. The centralized management console made it easy to monitor system status, review threat alerts, and apply policies across devices.

“It's intuitive and easy to use. I don't need to dig through layers of settings to find what I need—it's all there.”

Designed with small businesses in mind, ESET's solution offered a lightweight footprint and a powerful set of built-in tools that made it easier to protect users no matter where they worked.

“ESET is easy to use and comes with a wide range of utilities.”

ESET PROTECT Entry delivers exactly what's needed for this Michigan-based building automation provider: strong, dependable protection without the burden of complex management. With ESET in place, the company is able to maintain focus on delivering smart, energy-efficient building solutions, confident that its systems are secure.

KEY BENEFITS

- User-friendly console is easy to manage endpoints with minimal training
- Field-ready protection for remote and on-site users
- All-in-one security tools provide value without additional software
