THE CUSTOMER

CNY Fertility Center serves central New York state with clinics in Syracuse, Albany, Rochester and Buffalo. The company was founded by Dr. Robert J. Kiltz to provide women and men with comprehensive and affordable fertility solutions, regardless of age. CNY applies state-of-the-art solutions to the most complicated cases. Believing in a holistic approach to fertility wellness, CNY offers an integrative fertility care treatment plan that can include yoga, acupuncture and massage through the company's CNY Healing Arts. Consultation is available via Skype and phone, allowing CNY to connect with clients anywhere in the world regarding their reproductive health and fertility.

THE CHALLENGE

CNY had a piecemeal solution in place that was not scalable. According to their IT manager, they required a solution that could grow with the organization and offer continuous, real-time, multilayered security against various types of threats across multiple locations and for numerous remote workers. It was also essential to comply with strict HIPAA regulations to ensure the protection of clients' sensitive data.

THE SOLUTION

After exploring their options, CNY chose ESET for their IT security needs based on excellent user ratings and value for the cost. ESET Endpoint Antivirus gave CNY the ability to assess the security of their network, endpoints and mobile devices in real-time from a single management console. CNY's IT manager said good online documentation and support helped make installation and upgrades to new versions easier.

ESET gives CNY a cohesive, integrated solution that protects the company and their clients from security breaches. The solution is fully HIPAA compliant. As CNY's operation expands, ESET can grow with them.

KEY BENEFITS

- Scalable security that can grow with the company
- Affordable, feature-rich solution
- Single console network security management
- Regulatory compliance
