PRODUCT
ESET PROTECT Elite and ESET Managed Detection and Response (MDR)

THE CUSTOMER

TradingView is a leading social network and charting platform for financial markets, connecting millions of traders and investors worldwide. As a technology-driven platform that supports real-time financial analysis and community interaction, their IT infrastructure and support needs are critical to maintaining a seamless user experience.

THE CHALLENGE

TradingView needed a robust IT security solution to monitor and detect incoming network threats. Without a centralized detection and response system for their endpoints, they faced fragmented security monitoring, delayed threat responses and increased incident management complexity.

THE SOLUTION

After evaluating various options, TradingView chose ESET for its high-quality products, feature-rich platform, and competitive pricing. TradingView implemented ESET PROTECT Elite with Managed Detection and Response (MDR) for real-time threat monitoring and proactive attack defense across the organization's 450 endpoints.

"We did not use centrally managed EDR before but with ESET MDR in place now, we have a better level of protection."

TradingView significantly improved its security, streamlining IT operations and establishing a more secure and efficient infrastructure. With ESET MDR, they now benefit from 24/7 monitoring that integrates AI, machine learning and ESET's world-class human expertise for unparalleled threat detection and swift incident response.

KEY BENEFITS

- Centralized MDR for continuous threat monitoring and proactive response.
- Enhanced protection across the entire network.
- Faster threat detection.
- Reduced complexity and resource requirements in managing security.
